**USNR/CHUGOKU SAWMILL**  
Japan

## Linden's Proven High Speed Log Merchandising Systems DELIVER THE COMPETITIVE EDGE

- Traveling Saws cut single stems that have been scanned for defect, diameter, sweep & length.
- As stems advance to the Cut Cradle, Overhead Saws move to the optimized cut positions.

### Advantages:

1. **Reliable, Rugged, Heavy-Duty Design.**
2. **No Hydraulics Required** - The entire system can be operated with electric motors and drives.
3. **Accurate and Stable Saw Positioning** (within .0625") with Linden's Advanced Saw Guiding & Tracking System.
4. **High Speed Saw Travel** - Speeds up to 137"/second - Saws shift to the required position before the stem arrives in the Cut Cradle.
5. **High Speed Saw Cut** - a complete CUT CYCLE in under 2 seconds with our proven Bell-Crank Electric Drive Saws.
